

## Study guide for Science test

1. How are sound waves formed?
2. What are the three main parts of the ear?
3. What is the special machine that helps us to see sound waves and measure them?
4. What are the names of the three tiny bones in the ear? Altogether what are they called?
5. How does another animal hear sound? ( animal research)
6. What are all the parts of the ear?
7. How do humans make sound?
8. Thick and thin strings make different sounds when plucked.  
Which type of string make a high sound and which makes a low sound.
9. How do the sounds we hear make it to our brain?
10. How do humans make sound?

# I'm All Ears

Construct a mini-model of the ear. Cut out the three diagram pieces and tape them together to make one long strip. Fold the strip along the dotted lines so that the ear is facing outward.
